

Mistakes Noted:

1. I should've adjusted and lowered CVAD lumen locks before I removed the old dressing.
2. For efficiency, I should've assessed the Lungs and CVAD site together.
3. I should also have placed my clean gloves closer so I don't leave my patient's bedside while side rails are down.
4. I could've don't one-handed recap better.
5. I scanned my Rocephin syringe label instead of the vial.
6. I should've assessed the abdomen before injecting.
