

**Covenant School of Nursing
LVN-RN Track: Course Learning Guide**

Topic: Women's Health, Gynecological, and Obstetrical Care Part 1

Learning Goals/Outcomes

Upon completion of this lesson, you will be able to:

- Incorporate key terms related to gynecological and obstetrical care into nursing practice

Women's Health

- Investigate genetic factors and lifestyle choices which place a woman at risk for adverse health conditions
- Analyze the various contraceptive choices and nursing management for use based on patient needs
- Summarize preventative screenings, diagnostic procedures, treatments, nursing assessments and interventions for infections and gynecological conditions in women
- Review the health care needs and barriers for women of disparity and nursing actions to assist these women

Reproductive Anatomy and Physiology / Infertility

- Review human reproduction anatomy and function – male and female
- Identify common causes of infertility, diagnostic tests, methods used to treat infertility, psychosocial implications of assisted fertility, and nursing management associated with infertility issues

Conception / Fetal Development

- Examine basic components of conception and embryonic, placental, and fetal development
- Differentiate methods for diagnosis of pregnancy and determine estimated date of delivery (EDD)

Antepartum Period / Prenatal Care / Antenatal Screening

- Assess the physiologic and psychological changes during pregnancy and appropriate nursing interventions
- Determine the fundamental elements of assessment, patient education, and nursing care for prenatal visits
- Analyze the indications and nursing responsibilities for the common antenatal assessment/tests
