

Ami Rojas

Covid clinical paperwork

I think the reason Mrs. Williams could be experiencing confusion more than usual is because she has a UTI. She has a history of having UTIs in the past and she is also a dementia patient which tells me that she may not keep herself clean in the perineal area. Mrs. Williams is 74-year-old women who most likely forgets to drink plenty of fluids and this can also cause a UTI. The bacteria are probably traveling at this point.
