Patient Physical Assessment Narrative

PHYSICAL ASSESSMENT NARRATIVE BY SYSTEMS: (Complete using assessment check list and reminders below).

GENERAL INFORMATION (Time of assessment, admit diagnosis, general appearance)
Pt admitted to Hospital for Covid Pneumonia. Pt not Vaxinated Prior to Hospitialization, Pt has received Flu shot.

Neurological–sensory (LOC, sensation, strength, coordination, speech, pupil assessment)
Pt alert and oriented to Time/place/self/Situation. Pt upper extremities have equal Strength and Pull. Pt Speech is Clear and appropriate for Situation. Pt Does report tingling of Feet d/t Wegeners disease.

Comfort level: Pain rates at _____ **(0-10 scale) Location:** _____

Psychological/Social (affect, interaction with family, friends, staff)
Pt responds to staff and his wife appropriatly. Facial expression responsive and no difficulty processing info @ this time.

EENT (symmetry, drainage of eyes, ears, nose, throat, mouth, including dentition, nodes, and swallowing) No Drainage of EENT, No nodes Palpable. No Difficulty swallowing Pills or Food. Pt does report Dry eyes.

Respiratory (chest configuration, breath sounds, rate, rhythm, depth, pattern)
Normal Chest rise/Fall and RR @ 18. Pt lung Sounds Diminished W/O extra abnormal sounds Heard, Pt Becomes Short of Breath W/ambulation.

Cardiovascular (heart sounds, apical and radial rate, rhythm, radial and pedal pulse, pattern)
Pt Heart had S^1 & S^2 Present W/No additional Sounds Radial and Apical Pulses equal. Pedal Pulses slightly Diminished (1+), Cap refill less than 3 in upper and lower limbs

Student Name: _____ Date: _____

IM1 Patient Physical Assessment Narrative

Gastrointestinal (bowel habits, appearance of abdomen, bowel sounds, tenderness to palpation) Pt has Normal active sounds in all 4 Quadrants. Abdomen was soft and nontender. Pt is able to void in Bathroom and had loose stool (Type 5) this morning. **Last BM** 1-18-22

Genitourinary-Reproductive (frequency, urgency, continence, color, clarity, odor, vaginal bleeding, discharge) Pt uses urinal @ night But can ambulate to Bathroom. Urine was yellow

Urine output (last 24 hrs) _____ **LMP** (if applicable) N/A

Musculoskeletal (alignment, posture, mobility, gait, movement in extremities, deformities) Pt has ROM in all extremities, lower Extremities have weakness But able to ambulate w/assistance.

Skin (skin color, temp, texture, turgor, integrity) Pt has red Birth mark to left hand. Pt lower extremities have Darker complection d/t Wegeners → inflammation of Blood vessles → scarring of skin.

Wounds/Dressings

N/A

Other

Pt given walker to ease ambulatory strain on self and staff. Pt on 1 Special Respiratory Isolation for Covid 19

Adult/Geriatric Medication Worksheet – Current Medications & PRN for Last 24 Hours

Primary IV Fluid and Infusion Rate (ml/hr)	Circle IVF Type	Rationale for IVF	Lab Values to Assess Related to IVF	Contraindications/Complications
LR @ 80ml/hr	**Isotonic**			

Student Name: Grady Frazier		**Unit:** S7	**Patient Initials:**		**Date:** 1/18/22	**Allergies:** N/A	
Generic Name	**Pharmacologic Classification**	**Therapeutic Reason**	**Dose, Route & Schedule**	**Correct Dose? If not, what is correct dose?**		**Adverse Effects**	**Appropriate Nursing Assessment, Teaching, Interventions (Precautions/Contraindications, Etc.)**
Dexamethasone	corticosteroid	management of inflammation	10 mg IVP Q12hr	yes		seizure, euphoria, peptic ulcers, hyperglycemia, myopathy, angioedema, HF, HTN	1. Pt should avoid areas w/ large crowds to avoid infection. 2. Inspect pt skin for petechiae 3. For best results give one daily dose in the morning. 4. May mask signs of infection
Famotidine	Antiulcer drug	Prophylactic gastric ulcer prevention	20mg PO Daily	yes		Headache, dizziness, constipation, diarrhea	1. pts over the age of 50 are at an increased risk for reversible confusion that can last upto 3-4 days 2. Look for blood in emesis, stool, or gastric aspirate, and educate family members to report any sightings when pt returns home 3. May increase BUN, Creatinine, and liver enzyme levels 4. Drug may be taken initially with an antacid to further alleviate pain of ulcers.

Adult/Geriatric Medication Worksheet – Current Medications & PRN for Last 24 Hours

Enoxaparin	low-molecular weight heparin	Prevent DVT or PE	40mg Sub Q Daily	yes		edema, thrombocytopenia, hemorrhage, ecchymosis, prolonged bleeding, dyspnea, rash, angioedema, anaphylaxis	1. edu pt on reporting any numbness or tingling to spine or muscle weakness 2. dont expel air bubbles in syringe to not lose any medication 3. pt platelet counts should be monitored while on therapy 4. protamine sulfate is the reversal agent
Aspirin	Salicylate	Reduce risk of MI	81 mg PO Daily	yes		GI BLeeding, intracranial hemorrhage, pancreatitis, prolonged bleeding, angioedema, bruising, hearing loss	1. Stop 5-7 days prior to elective surgery 2. OTC meds may contain aspirin, there is a need to monitor for signs of toxicity (tinnitus, diaphoresis, vomiting, diarrhea) 3. Take with food or milk to reduce GI effects. 4. Avoid in use with hepatic impairment or active peptic ulcers.
Doxycycline	Antibiotic	Treatment for active infection	100mg PO Q12hr	yes		Intracranial hypertension, pericarditis, thrombophlebitis, anorexia, glossitis, dysphagia, N/V,	1.take pill with full glass of water and at least one hour before lying down to prevent esophageal ulcerations. 2. Avoid exposure to direct sunlight and ultraviolet light during and for 4 or 5 d after therapy is terminated to reduce risk of phototoxic reaction. 3.Ensure pt is compliant with completing regimen to prevent resistance. 4. Taking with food or milk will decrease risk of GI upset
Guaifenesin	Antitussive	Decreases mucus production	600 mg PO Q12	yes		Drowsiness, Nausea, vomiting	1.Increase fluid intake to help loses mucus, at least 8 glasses of fluid a day 2.contact physician if cough persistent beyond a week 3.Report any adverse reactions such as high fever, rash, or headache 4.may increase risk of hemorrhage in pts receiving heparin therapy.

Adult/Geriatric Critical Thinking Worksheet

Student Name: Grady Frazier **Unit:** S7 **Pt. Initials:** **Date:** 1/18/22

1. Disease Process & Brief Pathophysiology

Wegener's Disease: This is a disease with no known cause that is characterized by the inflammation of the blood vessels in the body. The inflammation, or vasculitis, can affect any organ in the body but is primarily known to affect the lungs, heart, and kidneys. The inflammation can cause the walls of the blood vessels to become weakened and stretched leading to increased risk of aneurysm or bleeding leading to decreased nutrients to vitals parts of the body.

2. Factors for the Development of the Disease/Acute Illness

No known causes, possibly related to abnormal immune response.

3. Signs and Symptoms

Loss of appetite

weight loss

fever

fatigue (P)

dry eyes (P)

rash/skin sores

kidney inflamation

4. Diagnostic Tests pertinent or confirming of diagnosis

Biopsy (P)

CRP(P)

Xray/CT: lung abnormalities

5. Lab Values that may be affected

WBC

CRP

BUN/Creatinin

RBC

6. Current Treatment

Corticosteroids for inflammation (P)

Immunosuppressants

7. Focused Nursing Diagnosis:

Ineffective airway clearance

8. Related to (r/t):

retained secretions

9. As evidenced by (aeb):

audible wheezing in all lobes of lungs

10. Desired patient outcome:

Pt will have clear lung sounds by end of shift 1/19/22 @ 1500

11. Nursing Interventions related to the Nursing Diagnosis in #7:

1 . Nurse will educate pt on proper ways of coughing and breathing.

Evidenced Based Practice: the most convenient way of clearing secretions is coughing.

2. Nurse will position pt in semi to high fowlers if tolerated.

Evidenced Based Practice: upright provides optimal positioning for lung expansion and air exchange.

3. Nurse will encourage increased fluid intake by pt.

Evidenced Based Practice: fluids help minimize mucosal drying and help improve secretion expulsion.

12. Patient Teaching:

1. create periods of rest and activity to optimize ADLs

2. Teach about TCDB and splinting techniques

3. Educate of home safety should pt require home O2

13. Discharge Planning/Community Resources:

1. Ensure pt is able to comply with antibiotic therapy to prevent risk of resistance.

2. Teach the pt to recognize factors that exacerbate ineffective air clearance such as allergens or smoke.

3. refer pt to home health services should they require home O2 or other respiratory devices.

1/18/22 Reflection

One of the first things we had to do during this round of clinicals was redraw all the labs the night nurse had gotten because all the values of them were far different compared to the previous days values, enough so to warrant questioning their validity. When asked by the nurse the pts all stated the night nurse had drawn from their peripheral IVs, and for one pt she was going to give potassium because her lab said 2.2 but the day nurse said to hold of and when redrawn from a new stick the potassium level was 3.8. The day nurse was not pleased with the travel nurse had conducted their duties and it was surprising to see how relaxed in practices some people can become. I am not sure if some hospitals have different procedures and policies but as we have been taught one way it is bizarre to see practices that are very different .
