

Student Name: Emily Autry

Date: 3/9/22

**Instructional Module 6
Obstetrics Community Clinical Experience**

Community Site: Dr. Blann

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

-During my day at Dr. Blann's clinic, I got to observe the nurse doing routine check ups for OB patients. I got to watch vital signs being taken and fetal heart rate with a doppler. I got to take a few blood pressures manually. I also learned more about charting in EPIC.

2. What was the best/most interesting part of the experience?

-The best and most interesting part about my experience was getting to feel the patient's stomach and finding the baby. It was also exciting to hear the baby's heartbeat from the doppler.

3. Is a community nursing position something that you would consider working in? Why or why not?

-I wouldn't prefer to work at a place like this because I like to be busy and see many different things throughout the day. I would prefer to work in a place like this later in life when I want to be off of my feet a little more and deal with less chaos.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

-This community site met the needs of the population they serve. They are all very kind and know all the things about OB/GYN. They were great about educating these women and addressing their concerns.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

-My nurse taught patients about their lab results, concerns about blood pressure, edema in their ankles, and any abnormal pain in their stomachs. I think the overall teaching from the doctor and nurses was helpful and appropriate. All the patients seemed comfortable and understanding of any information the nurses gave them. They also taught me a lot of things about lab testing and what each patient was coming in for and what stage of pregnancy they were in.
