

**Instructional Module 6
Obstetrics Community Clinical Experience**

Community Site: Bridget Winn Office (Suite 101)

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I had the chance to see several procedures and participate in some of them. For example, I saw several pap smear procedures and some IUD removal and insertion, and Nexplanon removal and insertion. Also, I assisted in getting tools and equipment during the procedures. Overall, the experiences were fun and interesting, and I enjoyed learning about each procedure very much.

2. What was the best/most interesting part of the experience?

Honestly, I found all the experiences educational, informative, and meaningful. I learned and saw various things which I did not know before. All the experiences I encountered were great but seeing IUD removal/insertion was eye-opening. It was fascinating to see how the device was inserted into the uterus. I thought the IUD insertion was done through surgery while you were under anesthesia.

3. Is a community nursing position something that you would consider working in? Why or why not?

I would consider working in this community nursing position because the nurse's role does not change no matter where your job is. The nurse and nurse practitioner were caring and nonjudgmental toward their patients. They made sure patients were comfortable and answered their questions therapeutically.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

I believe that this community site met the population's needs they served. I observed the staff members professionally doing their jobs and effectively helping the visitors' and patients' needs throughout the day.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

I witnessed patient teaching to every patient that visited. Based on the patient reason for visit, the care provider provided information, recommendation, and education. Most of the teaching was on contraception, so the provider explained each item's mechanism, pros and cons, duration, and things to avoid. I feel that patient teaching in this community site was adequate. Each patient had different health needs, so patient teachings were individualized.

Obstetrics Community Clinical Experience

Also, the provider gave resources like brochures and referred to other providers if patient needs were unmet.
