### Guided Reflection Questions for Medical Case 1: Kenneth Bronson

#### Opening Questions

How did the scenario make you feel?

I was not expecting the pt to go into anaphylactic shock and I froze.

#### Scenario Analysis Questions\*

**PCC, EBP** What signs and symptoms led you to the conclusion that Kenneth Bronson was experiencing an allergic reaction?

**Chest tightness and the inability to breathe.**

**PCC, EBP** Discuss the differences between mild, moderate, and severe anaphylactic reactions.

**Mild is non emergent reaction such as watery eyes and a runny nose.**

**Moderate reactions require medical assistance.**

**Severe rxn involves difficulty the respiratory and/or the cardiovascular system.**

**This rxn can kill.**

**EBP/S** Discuss the importance of follow-up assessments post-reaction.

**The importance is to make sure the rxn is responding to interventions and it doesn't rebound.**

#### Concluding Questions

What further needs does Kenneth Bronson have at the end of the scenario that future nursing care should address?

His allergic rxn and the need for epi pens. Education on proper medical intervention before an illness needs emergent medicine.

Reflect on how you would communicate with family members in an emergency situation if they were present at the bedside.

I would educate them on the situation, what to look for, and what to do.

After completing the simulation and reflecting on your experience, what would you do differently (or the same) for the patient experiencing acute respiratory distress?

I would be ready for any situation; I didn't expect him to go into anaphylactic shock and it reminded me how things can turn quickly.

How could you prepare for clinical to anticipate potential patient emergencies?

I would prepare by using clinical judgement in assessing and touching my patient. Knowing adverse rxns to drugs administered for the first time to my pt.
