**Instructional Module 6
Obstetrics Community Clinical Experience**

Ami Rojas

Community Site: Covenant Winn office

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe? I was able to see many women ask about birth control and many of the patients were not very educated. I was also able to see how Mrs. Winn was able to communicate with some patients and the patients felt very comfortable talking to her about very personal issues.

2. What was the best/most interesting part of the experience? I think the most interesting part of my experience was hearing what some of the patients have gone through. Whether it be physically or mentally. There was a patient that was having painful intercourse but there was no physical barrier for this to be happening so I think it was psychological issues that was causing her to contract down there but I am not sure. She had past history of sexual abuse so that is why I think that.

3. Is a community nursing position something that you would consider working in? Why or why not?

I would love to work as a community nursing because I loved really getting to know the patients and I felt that our community of women are very uneducated about their bodies and birth control. I like that we had patients of all ages and hearing about what concerns they had and how impacted their lives.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, Mrs. Winn and her team were amazing at teaching the patients that came in. There were patients from age 16 to 65.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

I love the way that this clinical site educated the women that came in. Most of the patients had many questions about birth control and the older woman had questions about what happens after they have a hysterectomy. It was so amazing to see how women have different needs in different stages of their lives.
