Disciplinary Action Summary Assignment
Instructional Module 2

: Michael Tejeda

Date: 1-20-23

DAS Assignment # __1__

Name of the defendant: Carla Deann Auzenne
677261

License number of the defendant:

Date action was taken against the license: March 20th 2012

Type of action taken against the license: enforced suspension

The defendant displayed suicidal ideation, there were marks on the defendant's arms and she stated that she would not use drugs, she would use insulin to kill herself. This is bad because she had her mind clouded and she was not in the right state of mind to care for patients. The defendant also stole morphine from her hospital and she showed up to work the next day, when she was scheduled off. This was likely to defraud the facility to make herself clear of the accusations. The defendant later met with a counselor and admitted to taking morphine

I think the defendant had an addiction problem also struggled with stress. A simple meeting with a friend, coworker, or counselor would have helped her out. I think she failed to address her problems right away and because of this these issues came about.

She put her patients in danger because she was not in the right state of mind to provide care. She also violated medication administration universal competencies because she stole narcotics and did not document not giving it to her patients, who needed it.

If I saw the defendant acting suspicious or looking down I would simply try to be friendly and let her know that I'm there for her. For all we know she may not have had anyone in her life that was simply just there for her. I feel like if someone was there for her she would have resorted to her friend's advice rather than stealing narcotics and being depressed.
