

# COVENANT SCHOOL OF NURSING

## Disciplinary action summary assignment

instruction module 2

Briana Mojica

01/27/202

DAS assignment 2

Jaqueline Inez Adams

686831

Oct. 4<sup>th</sup> 2022

Voluntary surrender

Adams failed to follow the systematic hypoglycemic protocol. The patient had a glucose level of over 10 mg and a serum glucose level of 16 mg. The patient's glue close level was low, and Adams failed to recheck after administering the gel. He also felt a document pain and notify the physician. He also put the patient on a NPO without an order.

If atoms could have followed the symptomatic hypoglycemic protocol, then he could've avoided surrendering his license. As nurses we cannot order anything without the physicians orders.

Standard precaution was violated. The special precautions that were required were not assessed properly. Critical thinking, was violated because he did not go over his history, his situation, his background or the assessment pertaining to his glucose level.

If I was the first nurse to discover the vet, I would first try to stabilize the patient then I would call a rapid response team if I was seeing the patient going septic I would notify the physician I would notify the charge nurse.
