

ECG Interpretation Build Your Study Guide

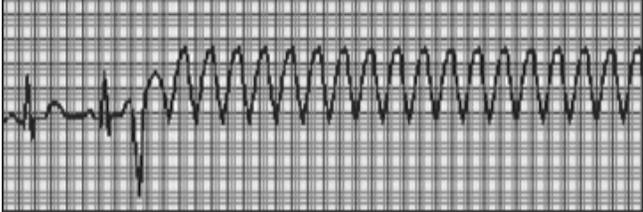

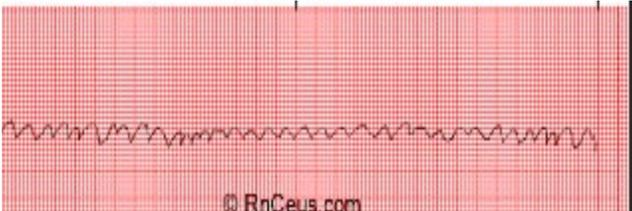

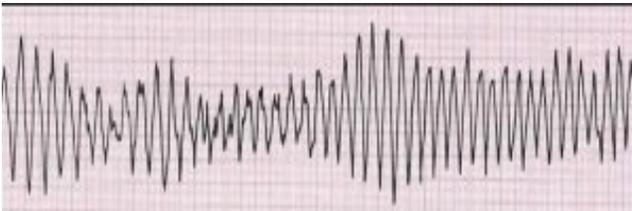

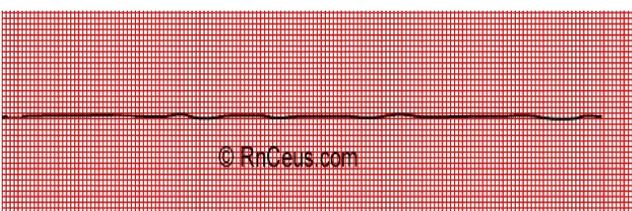

Rhythm	Identification & Characteristics	Causes / Treatment	Nursing Responsibility	Important Notes
	NSR			
	Sinus Brady			
	A-fib c RVR			
	A-Flutter			

Rhythm	Identification &	Causes / Treatment	Nursing	Important Notes
--------	------------------	--------------------	---------	-----------------

	Characteristics		Responsibility	
	ST			
	PSVT			
	Sinus brady c 1 st degree AV block			
	Bigiminy			

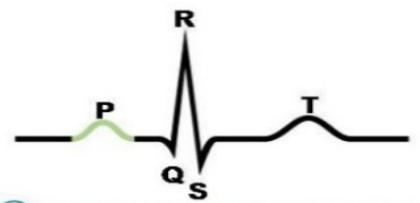

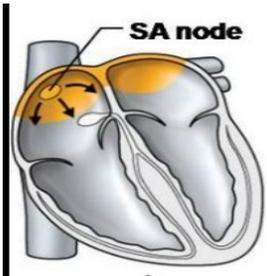

Rhythm	Identification &	Causes / Treatment	Nursing	Important Notes
--------	------------------	--------------------	---------	-----------------

	Characteristics		Responsibility	
	Trigeminy			
	Multifocal Couplets			
	Unifocal Couplets			
	V-Tach			

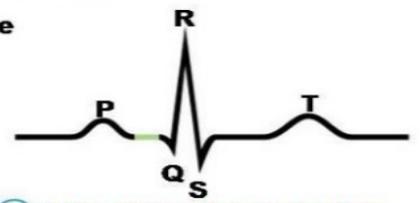

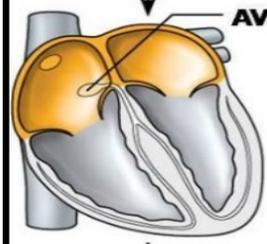

Rhythm	Identification & Characteristics	Causes / Treatment	Nursing Responsibility	Important Notes
	R on T V-tach			
	V-fib			
	Torsades			
	Asystole			

Rhythm	Identification & Characteristics	Causes / Treatment	Nursing Responsibility	Important Notes
--------	----------------------------------	--------------------	------------------------	-----------------

	Mobitz I			
	Mobitz II Winckebach			
	3rd degree heart block			

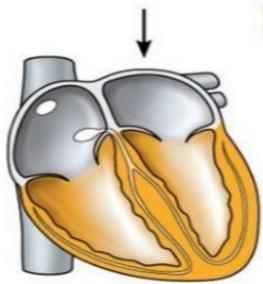

① Atrial depolarization, initiated by the SA node, causes the P wave.

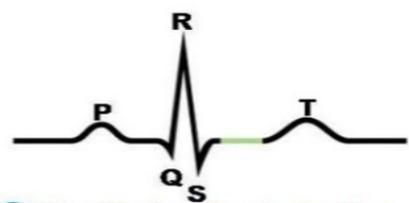

② With atrial depolarization complete, the impulse is delayed at the AV node.

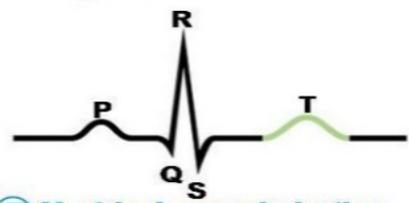

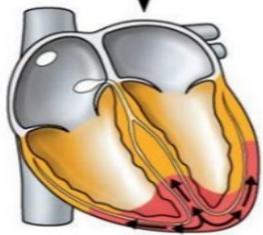

③ Ventricular depolarization begins at apex, causing the QRS complex. Atrial repolarization occurs.

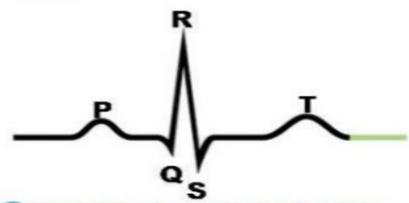

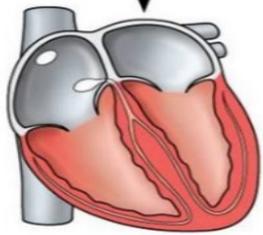

■ Depolarization ■ Repolarization

④ Ventricular depolarization is complete.

⑤ Ventricular repolarization begins at apex, causing the T wave.

⑥ Ventricular repolarization is complete.
