- Cushing's Syndrome

COULOMBE

- Parkinson's Disease
- Multiple Sclerosis

STARCH

- Macular Degeneration
- Diabetes

Topic Guidelines:

Be sure to base presentation on new research.

As the guideline explains, expect your audience to have professional background. (Do not teach what has already been taught).

To help narrow your search, ask a question: (Example: What new treatment is out for this topic? How is this affecting how this disease process is addressed? Is "therapy A" more effective than "therapy B"? etc...) Discuss with your advisor if you need help getting on the right track.

Examples/Ideas of topics to discuss:

- Treatment
 - o New drug therapy
 - o New surgical options or techniques
- Diagnostic testing
- Prevention/lifestyle/symptom management
- Include available support groups/patient resources if applicable.
