**Instructional Module 6
Obstetrics Community Clinical Experience**

Community Site: Dr. Blann's office

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I was able to observe several vaginal exams to check for dilation along with some NST's and a growth ultrasound. I was able to assist with a NST and was able to find the FHT's using the doppler.

2. What was the best/most interesting part of the experience?

The best part was being able to apply what I learned in class in the clinical setting.

3. Is a community nursing position something that you would consider working in? Why or why not?

At first, I didn't think working in an "office" would be for me but after this experience I would absolutely love it. They stay busy and get to participate in being an integral part of the pregnant women's experience.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, and more! They must be able to analyze so many different things and be prepared for the progression of labor. They are very knowledgeable in their field and were willing to share what they know.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

I witnessed a plethora of patient teaching. Every patient that walked through the door immediately began receiving teaching. From learning about fetal movement to birth control options to vital sign changes. They were on top of it. Their patient teaching skills are strong and display a high level of professionalism.
