

## School Nurse Experience Reflection Questions

Angelique Aimee Fuambu

3/30/2023

IM 5

1. How has your view of the student population changed? **My view of the student's population has change because I didn't know that so many students will be sent to the nurse throughout the day.**
2. How has your view of the school nurse role changed? **Yes, my view of the school nurse role has changed because, I thought the role of the school nurse was to check vitals sign and provide basic patient care, but I was wrong because the school nurse not only, she had to focus on the sick students, but she had to follow a care plan for student with chronic disease and gives scheduled medications to the students that need treatments. I realized that She also listened and carried out preventive actions by verify that students' vaccines updated.**
3. What surprised you about the school nurse experience? **I was surprised to see the nurse with so many assignments and the numbers of medications she had to give to student with chronic disease.**
4. What did you observe during your time there? **I observed a nurse prepared and administer food to a student via the feeding tube, I saw the oral and inhaler medication admit. I also saw the director of school nurse updating and verifying that each student medications matching with what they have in the records with the correct dose and correct route and that there are not expired.**
5. How was your experience different from what you expected? **I was not expecting to see the school nurse being assigned to give medication to so many students, have to call parent for the ones that are sick and that needed to be sent home, and informed parent of each action taking based on each student individual case.**
6. What are some of the needs/issues related to the health of the school age children that you may not have been aware of? **I saw that the school did not provide sterile water to flush the feeding tube, and gloves.**
7. Please list two developmental stages related to the population that you observed.

**School age students were informed about their scheduled medication and did not need much help.**

**Preschoolers seem scared being at the nurse office.**
