**Instructional Module 6
Obstetrics Community Clinical Experience**

Community Site: std clinic

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

- when I got there I was able to be super hands-on. I gave vag exams, oral swabs, anal swabs, injections, blood draws, and so much more. But, I observed that a lot of people don't use condoms when they have multiple partners.

2. What was the best/most interesting part of the experience?

The most interesting part of the experience was when I went to the lab and the tech showed me how the different diseases looked underneath the microscope.

3. Is a community nursing position something that you would consider working in? Why or why not?

Yes, because I feel like that could be my way of giving back to my community.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, because they're inexpensive. They help people that can't afford to pay for the meds.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

Yes!!! A lot of patient teaching was going on! The thing that stuck out the most to me was Texas being on a med shortage for gonorrhea/chlamydia, so they have to use PO doxycycline instead.

Obstetrics Community Clinical Experience

I think that the nurses did a fantastic job of teaching the patients, but it's all about the patient actually doing it.
