

IM6 OB Simulation Patient Preparation Worksheet

RECOGNIZE & ANALYZE CLUES

This section is to be completed prior to Sim Day 1:

Student Name: _____

Patient initials: _____ Admit Date: _____

Diagnosis: G _____ P _____ AB _____ L _____ M _____

EDD: _____ / _____ / _____ Gest. Age: _____

Blood Type/Rh: _____ Rubella Status: _____ GBS status: _____

Obstetrical reason for admission: _____

Complication with this or previous pregnancies: _____

Chronic health conditions: _____

Allergies: _____

Priority Body System(s) to Assess: _____

Pathophysiology

Interpreting clinical data collected, what is the primary/current medical/obstetrical problem?

State the pathophysiology of this problem in your *own* words.

Medical/Obstetrical Problem	Pathophysiology of Medical/Obstetrical Problem
Fetal/Newborn Implications	Pathophysiology of Fetal/Newborn Implications

Problem Recognition

To prevent a complication based on the primary medical problem, answer each question in the table below.

Question	Most Likely Maternal	Most Likely Fetal	Worst Possible Maternal	Worst Possible Fetal
Identify the most likely and worst possible complications.				
What interventions can prevent them from developing?				
What clinical data/assessments are needed to identify complications early?				

What nursing interventions will the nurse implement if the anticipated complication develops?				
---	--	--	--	--

Surgery or Invasive Procedures

Describe the procedure in your own words. *IF this applies to your patient.*

Procedure

Surgery / Procedures Problem Recognition

To prevent a complication based on the procedure, answer each question in the table below.

Question	Most Likely Maternal	Most Likely Fetal	Worst Possible Maternal	Worst Possible Fetal
Identify the most likely and worst possible complications.				
What interventions can prevent them from developing?				
What clinical data/assessments are needed to identify complications early?				
What nursing interventions will the nurse implement if the anticipated complication develops?				

Pharmacology

Any new drugs ordered during scenario must be added to the sheet before student leaves the simulation center for the day.

Medications	Pharm. Class	Mechanism of Action in OWN WORDS	Common Side Effects	Assessments/nursing responsibilities

STARTING POINT & PLAN OF ACTION - Nursing Management of Care

1. After interpreting clinical data collected, identify the nursing priority goal for your shift and three priority interventions specific for your patient. For each intervention write the rationale and expected outcome.

Nursing Priority			
Goal/Outcome			
Priority Intervention(s)	Rationale	Expected Outcome	
1.	1.	1.	
2.	2.	2.	
3.	3.	3.	

EDUCATION PRIORITIES/DISCHARGE PLANNING

1. Identify three priority educational topics that should be included in a teaching plan to prevent complications and prepare this patient for discharge.

Teaching About Illness Care	Rationale	How are you going to teach?
1.	1.	1.
2.	2.	2.
3.	3.	3.

Abnormal Relevant Lab Test	Current	Clinical Significance
Complete Blood Count (CBC) Labs		
Metabolic Panel Labs		
Are there any Labs result that are concerning to the Nurse?		

This Section will be completed at Simulation Lab when you receive your patient's

chart prior to the scenario. Do not complete before your scenario.

Current Priority Focused Nursing Assessment							
CV	Resp	Neuro	GI	GU	Skin	VS	Other

Focused OB Assessment						
Time	Contractions	Emotional/ Psyche	Fetal Assessment	Labor Stage/phase	Pain/ Plan	Vaginal exam
	Freq. Dur. Str.		FHR Var. Accel. Decel. TX.			Dil. Eff. Sta. Prest.
	Freq. Dur. Str.		FHR Var. Accel. Decel. TX.			Dil. Eff. Sta. Prest.
	Freq. Dur. Str.		FHR Var. Accel. Decel. TX.			Dil. Eff. Sta. Prest.
	Freq. Dur. Str.		FHR Var. Accel. Decel. TX.			Dil. Eff. Sta. Prest.

EVALUATION of OUTCOMES – to be completed AFTER scenario.

- Which findings have you collected that are most important and need to be noticed as clinically significant?

Most Important Maternal Assessment Findings	Clinical Significance
Most Important Fetal Assessment Findings	Clinical Significance

2. After implementing the plan of care, interpret clinical data at the end of your shift to determine if your patient's condition has improved, has not changed, or has declined.

Most Important Data	Patient Condition		
	Improved	No Change	Declined

3. Has the patient's *overall* status improved, declined, or remained unchanged during your shift? If the patient has not improved, what other interventions must be considered by the nurse?

Overall Status	Additional Interventions to Implement	Expected Outcome

End of shift SBAR to oncoming nurse (the observers for your scenario)
