EVALUATION of OUTCOMES – to be completed AFTER scenario.

1. Which findings have you collected that are most important and need to be noticed as clinically significant?

Most Important Maternal Assessment Findings	Clinical Significance
Group B positive to infant possible infection	can cause RDS to infant
Most Important Fetal Assessment Findings	Clinical Significance
decel. at 80% infection	low perfusion, & can cause RDS

Give your patient's
info.

When you receive your scenario

clinically significant?

2. After implementing the plan of care, interpret clinical data at the end of your shift to determine if your patient's condition has improved, has not changed, or has declined.

Most Important Data	Patient Condition		
	Improved	No Change	Declined
Pain Pt. pain level 8	/		

3. Has the patient's overall status improved, declined, or remained unchanged during your shift? If the patient has not improved, what other interventions must be considered by the nurse?

Overall Status	Additional Interventions to Implement	Expected Outcome
Improved	Position state ^{changes} Administer pain med	decrease pain

End of shift SBAR to oncoming nurse (the observers for your scenario)

Situation	Alice Jones 24 y/o G1 P1 Group B Pregnancy at 39 wks & ROM early labor
Background	Alice Jones 24 y/o G2 P1 ^{Allergy} Penicillin Group B strep positive delivered 9lb 8oz male infant
Assessment	98% RA B/P 138/8 T 98.6 HR 140 moderate variability acceleration
Recommendation	Assess pain level & postpartum depression
