# Clinical Care Concept Map

**Patient Presentation:**
Came in w/ confusion r/t UTI
full nsr
6L CPAP overnight
(R) dorsal forearm w/ (R) dorsal wrist IV
Diet: pureed & thickened liquids
BPH - Chronic catheter use    HTN

**Assessment/noticing cues:**
Crackles / rhonchi / dyspnea
tachypnea
        Confusion

**Primary Concept:**
Perfusion

**Related Medical Diagnosis:**
NSTEMI, sepsis

**Interpreting and Prioritizing cues:**
Pt. has UTI

lung sounds r/t pneumonia - hard to breath

**Responding/take action:**
Monitor Vitals & SaO2   Incentive Spirometer
Provide O2
Neuro assessment
Fluid resuscitation if needed

**Reflecting /evaluate outcomes:**
Pt. O2 sat ↑
tachypnea resolved
finds it easier to breath

**Relevant diagnostic Tests, Treatment, and Relevant Medications:**

| | |
|---|---|
| WBC | beta blockers |
| Hgb | ABX |
| Hct | Ace inhibitors |
| AST | blood thinners |
| ALT | |
| Troponin | |

**Worst Case Scenario/Potential Complications:**
Septic Shock
  tachypnea
  tachycardia
  dyspnea
