**Instructional Module 6
Obstetrics Community Clinical Experience**

Community Site: Dr. Blann

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I was able to take manual blood pressures on every patient that came in, as well as being able to find the heart tone of the fetus via Doppler.

2. What was the best/most interesting part of the experience?

I was able to observe patients at different gestational weeks that had different fundus heights, to be able to palpate and feel the way the fetus was laying.

3. Is a community nursing position something that you would consider working in? Why or why not?

I could see my self being a community nurse, but the type of nursing I'm wanting to do is trauma, I did work in a office type setting for 8 years, and I think its time for a change.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes the community site that I attended was outstanding, they cared for the needs and concerns of their patients,even telecommunication through out the day of concern first time mothers was great.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

I was able to witness the RhoGAM shot and the teaching on why it was given; when the patient had concerns and wanted to know why she was receiving it. The nurse explained in layman terms on why it was needed to be given, and the risks it could cause in the future for other gestation's the patient might want to have if not taken.
