POST-CLINICAL REFLECTION **OB Simulation Reflection - due on Thursday by 2359**

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	I was nervous but I felt confident with how to approach the scenario. I was nervous because I had not had any experience with a pregnant mannequin or talking to a patient that was in labor.
What did you already know and do well as you provided patient care?	I knew therapeutic communication and comfort measures for a mother in labor. I felt like I did a good job of staying calm when the mannequin started giving birth.
What areas do you need to develop/improve?	I need to learn to manage my time better and feel more confident in my education to the patient and family members in the room.
What did you learn today?	Learn to acknowledged allergies to give correct medication. How to adjust to a rapidly changing room.
How will you apply what was learned to improve patient care?	Time management and be prepared for a prompt delivery at any time.
Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes .	<ol style="list-style-type: none">1. Evaluate effectiveness of patient/family communication and education: I educated on why she needed to receive medication for GBS even when she didn't want to receive meds for her birth plan.2. Collaborate with other healthcare members to provide quality care: When the mannequin started giving birth we communicated to call the doctor

while I comforted the mom and the extra nurse calmed the family member in the room.

3.
