

POST-CLINICAL REFLECTION OB Simulation Reflection - due on Thursday by 2359

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	Prior to clinical I was anxious, but while I was watching the other scenarios I began to develop a plan and became confident by the time it was my turn.
What did you already know and do well as you provided patient care?	I went into the scenario knowing what the worst possible complications the mother could experience based on what the mother's medical history was.
What areas do you need to develop/improve?	I could have performed a vaginal exam prior to calling the doctor.
What did you learn today?	I learned to become more confident in my practice.
How will you apply what was learned to improve patient care?	I will make sure I have done all prior assessments and exams prior to calling the doctor so that I don't look like a fool.
Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes .	<ol style="list-style-type: none"> 1. I demonstrated clinical judgment when I prioritized the mothers low blood sugar by administering insulin using the sliding scale provided. 2. I maintained safety and quality when I verified the mother's DOB, allergies, and full name prior to administering the insulin. 3. Patient centered care was shown when I reassured the father about the FHM and described the changes happening while also using therapeutic communication.
