POST-CLINICAL REFLECTION OB Simulation Reflection - due on Thursday by 2359

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	I honestly had a fun time during the OB clinical SIM. I didn't stress out or freak out during the scenario.
What did you already know and do well as you provided patient care?	Throughout the scenario with Baby Jones I knew we were going to have problems with hypothermia, and possibly something contributing to the untreated GBS+.
What areas do you need to develop/improve?	One thing I DEFINITELY need to work on is figuring out who is in the room in the scenario. The other member in the room said she is a distant cousin and the "patient" agreed. But come to find out later the patient said "She came in here and said she was family so I believed her", "I've never seen her before".
What did you learn today?	I learned that even though we can do everything right in treating a patient they may not get better or respond well to treatment so once I did everything we moved the baby to the NICU.
How will you apply what was learned to improve patient care?	In future scenarios, I will be able to apply this and act quicker when deciding on moving our patient to a higher level of care.
Please **reflect** on how your OB simulation learning experience assisted in meeting 2-3 of the **Student Learning Outcomes.**	1. For clinical judgment, when the baby still wasn't getting any better I decided to call the doctor and we decided to move the baby to a higher level of care. 2. For communication/collab, I worked with our charge nurse and the doctors, as well as eventually NICU to treat the baby and help it get well. 3. For patient-centered care we did our best to take care of the baby and allow it to continue to bond with mom for doing skin to skin, as well as trying to get mother to breast feed with the infant.
