POST-CLINICAL REFLECTION **OB Simulation Reflection - due on Thursday by 2359**

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	I was nervous walking in because I wasn't sure what to expect but I feel like I learned a lot and got to put my OB learning into practice. In module 5 I never got to take care of a newborn, so it was interesting being able to do that!
What did you already know and do well as you provided patient care?	I already knew how to explain some things to the mom and patient safety. I feel like I implemented this very well when the mom's friend was trying to steal her baby.
What areas do you need to develop/improve?	I need to become more comfortable reading the fetal monitor and placing the tocos.
What did you learn today?	Today I learned and became a little more comfortable in understanding the basics of the FHM. I also learned how to titrate oxytocin.
How will you apply what was learned to improve patient care?	I feel like what I learned in SIM this week will be used for the rest of the weeks during clinicals and hopefully I get to place the tocos so I can become more comfortable with it! I also will be able to understand what the nurses and physicians are talking about when they are talking about a patient.
Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes.	<ol style="list-style-type: none">1. Safety and Quality: I demonstrated this when I walked into my patient's room and the family's arm band did not match the mother or baby's arm band.2. Patient centered care: I demonstrated this when I checked my baby's blood sugar and did the GBS testing during all the chaos from the friend and sister of the mother.3.
