

## **Instructional Module 6: Obstetrics Community Clinical Experience**

Community Site: Covenant Women's Health- Bridget Winn, NP

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

1. During the day with Bridget Winn I was able to observe several breast exams, pap smears, vaginal cultures, urine dipsticks.

2. What was the best/most interesting part of the experience?

2. The best part about this experience was being able to watch the provider listen to the patient and try and determine what the cause of the patients pain or reason for their chief complaint and formulate a way forward.

3. Is a community nursing position something that you would consider working in? Why or why not?

3. I would not want to work in a community nursing position only because while it does offer a variety of problems/complications, it is a slower paced environment and I'm afraid I would tire quickly. Due to my previous work experience as a CMA in an OB/GYN office I understand what that entails and I don't want to do that for my nursing career.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

4. The community site was very good at serving the population that came into the office. The only thing that was frustrating was dealing with procedures and imaging the provider wanted to order but not being able to do so, due to different insurances not covering procedures or imaging.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

5. In every room there was patient teaching done which varied from teaching about dense breast tissue, birth control options and when fertility returns after cessation, teaching behind lab values and what they could mean.
