POST-CLINICAL REFLECTION OB Simulation Reflection - due on Thursday by 2359

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
<p>What feelings did you experience in clinical?</p> <p>Why?</p>	<p>At first I was feeling anxious but once we went through a scenario together it made me feel better about the scenarios to come. Was feeling anxious since I have no experience with a pregnant patient.</p>
<p>What did you already know and do well as you provided patient care?</p>	<p>I knew the basic assessments done which was putting on the fetal heart monitor and doing Leopold's maneuver, also educating patient and talking to the family member.</p>
<p>What areas do you need to develop/improve?</p>	<p>I need to work on being more organized with my thoughts and work on not panicking and think properly in a stressful situation.</p>
<p>What did you learn today?</p>	<p>I learned how to give an effective SBAR, how to react in certain situations, and what interventions to do when the fetal heart is declining. Also, priorities can change when you walk into the room.</p>
<p>How will you apply what was learned to improve patient care?</p>	<p>Talk to the patient and let them know what exactly is going on, call the physician if you know something is wrong. Also talk to the family member and know what to say to ease their nerves do not just ignore their concerns</p>
<p>Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes.</p>	<p>1. Professionalism. Took accountability for my medication error, also When the physician snapped and said why did you not call me sooner, I stated I know I should have called the physician before.</p> <p>2. Clinical Judgement. In my scenario the FHR was decreasing, and we performed IUR.</p> <p>3.</p>
