

Priscilla Garcia SICU

Reflection: midterm

My last four shifts in the ICU I had a critical care patient. I was exposed to a lot of new terminology + knowledge. Thankfully there were a lot of nurses who helped me learn the devices my patient was on. My 2nd shift was when I was introduced to this patient. Her heart is very sick. I got to see her be extubated and see her recover a bit + I really appreciate that. I got really close w her family, seeing someone at their worst + seeing them get better is always good. I felt I did well asking for information + also doing my own research. I also got more efficient at knowing + doing what needed to be done hourly.
