POST-CLINICAL REFLECTION OB Simulation Reflection - due on Thursday by 2359

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	I was pretty confident going into my scenario. Blood sugar can be managed and it was more about baby then mom. That took some of the pressure off of me.
What did you already know and do well as you provided patient care?	I already knew that the baby was going to have a low blood sugar based on the SBAR and pre brief. I did well on checking blood sugar checks and putting the correct interventions to help baby. Then when they didn't improve, we called Physician to move baby to NICU
What areas do you need to develop/improve?	I could have been more organized when it came to my plan. Being able to just focus on what's important and not extra things. Instead of trying to do the vaccines and vitamins, I should have just focused on VS and BS
What did you learn today?	I learned sometimes things won't go to plan, however if you just focus on what's important and how to fix it.
How will you apply what was learned to improve patient care?	I will use this information and apply evidence-based practices to make informed decisions. Utilize clinical guidelines and protocols to ensure standardized care. I can also integrate critical thinking skills to assess, diagnose, and treat patients effectively.
Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes .	<ol style="list-style-type: none"> 1. Family centered care- Letting mom know about how she can go see baby in NICU. Giving education about how we can help her see baby. 2. Interventions- correcting blood sugars and sending baby to NICU when we could not do anything else and needed more care. Blankets and trying skin to skin for temp. 3. SBAR – giving report to the NICU nurse about the baby and what we tried to do to fix the blood sugar
