POST-CLINICAL REFLECTION OB Simulation Reflection - due on Thursday by 2359

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	I was nervous during my scenario, because I always think there is something I am missing.
What did you already know and do well as you provided patient care?	I already knew that I needed to imitate IUR, and I feel I recognized that and executed it well.
What areas do you need to develop/improve?	I need to improve in patient communication, but I think that may just be me feeling awkward talking to a mannequin.
What did you learn today?	I learned that you always have to ID anyone who is in the room with baby!
How will you apply what was learned to improve patient care?	I will apply this in real life situations to keep my patient safe.
Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes .	<ol style="list-style-type: none"> 1. Safety & <u>quality</u>: I learned how to keep a baby safe and prevent a code pink! But in case it does happen, I now know how to handle it. 2. Clinical <u>judgement</u>: I knew when to initiate IUR, using <u>evidence based</u> data. 3. Communication & collaboration: I feel like I communicated with my charge nurse <u>well and</u> gave a good SBAR to the physician.
