Instructional Module 6: Obstetrics Community Clinical Experience

Community Site: Angela Westfall

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

Our first patient came in for an annual well-women visit. The provider did a pap smear and breast exam. I did VS on both patients that came in.

2. What was the best/most interesting part of the experience?

Getting to see the pap smear was interesting. Also, it was great to be on the other side... hana 😊

Angela was an excellent teacher and showed me the patient's cervix.

3. Is a community nursing position something that you would consider working in? Why or why not?

I don't think I would want to work in a clinic setting, at least not for several years. The pace was very slow and I feel like I would lose tons of experience with skills.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Absolutely! They explained to me that the clinic is geared toward supporting patients from the start of their first period through menopause. They are not an OB office, but still they are a huge asset when it comes to women's health.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

Yes. The nurse taught the first patient everything about a pap smear. She explained the purpose of it as well as a very detailed description of the equipment and how the provider would use it.

The patient teaching was adequate at this clinic.

Both the nurse, Kelsey, and the midwife, Angela, were

very knowledgeable and took time to talk to the patients.
