POST-CLINICAL REFLECTION OB Simulation Reflection - due on Thursday by 2359

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	The feelings I experienced in simulation was exciting that I am learning new things. I was a little nervous doing my time as the nurse, but overall, I felt like it was a great experience.
What did you already know and do well as you provided patient care?	Most of the stuff we did in sim we had already learned in class along with going to do clinical in labor and delivery and mom and baby. It did feel good to get a refresher though.
What areas do you need to develop/improve?	I need to address the family along with the patient and remember that the family is included in full patient care.
What did you learn today?	I learned that step infection (GBS) is an infection that can be passed down to the baby during delivery. This could cause a serious infection for the child. That's why it's important to treat the mother before the delivery of the child.
How will you apply what was learned to improve patient care?	This whole clinical section has been great. I feel like I will be able to use all this in my care and future care of patients. Even though I don't want to work in labor and delivery or mom and baby. You never know when you will have to take care of a pregnant mom.
Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes .	<ol style="list-style-type: none">1. I already posted my SLOs in my folder. Let me know if I also need to put them here.2.3.
