

POST-CLINICAL REFLECTION **OB Simulation Reflection - due on Thursday by 2359**

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
What feelings did you experience in clinical? Why?	In clinical my main feeling that I had was happiness. I was happy to be there and the scenarios were amazing.
What did you already know and do well as you provided patient care?	I had a pretty good knowledge about Diabetes and with my luck my patient had a diabetic issue.
What areas do you need to develop/improve?	I defiantly need to know my hospital protocols on the certain codes especially for an abduction. I also need to work on being more aware of the staff that is readily available to stay with a unstable patient!
What did you learn today?	I learned what a code PINK is for and that it is okay to call for help.
How will you apply what was learned to improve patient care?	I will lean more on my trained staff that I have by my side and be more willing to ask for help. Not only will this help me not suffocate but help my patients as well.

Please **reflect** on how your OB simulation learning experience assisted in meeting 2-3 of the **Student Learning Outcomes.**

1. My clinical judgment was spot on for calling security when my patient was taken! I voiced over my Volcera immediately because I knew they have the power to lock down the unit or hospital.

2. I provided excellent communication & collaboration with Mrs. Williams by reassuring her that if I can't get her baby stabilized I will call someone who can. I educated that why he had to go and that he will be in good hands!

3.
