### Instructional Module 6: Obstetrics Community Clinical Experience

Community Site: Dr. Lamotte's office

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I observed a couple of routine Pap smears, a 10 week date & time ultrasound, a Nexplanon insertion, some vaginal exams, and a colposcopy.

2. What was the best/most interesting part of the experience?

The best part of the experience was seeing how happy a patient and her partner were to see their baby on the ultrasound. I found it sweet to see how excited these new parents were.

3. Is a community nursing position something that you would consider working in? Why or why not?

I would consider a community nursing position because it's a great way to serve a large number of people in a short amount of time.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

This community site met the needs of their population because they were able to meet their physical needs through procedures and medication, as well as their emotional needs by providing therapeutic communication and education.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

I witnessed a good amount of patient education over GBS screenings, and why they are done at their 36 week appointment. They also educated the importance of taking prenatal vitamins while pregnant. I feel like the patient teaching was adequate because the patients would feel calm & reassured by the time their appointment was over.

6. Provide examples of care describing *one or more* of the IM6 Student Learning Outcomes.

IM6 Student Learning Outcomes				
Safety & Quality	Clinical Judgment	Patient Centered Care	Professionalism	Communication & Collaboration
Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.	Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.	Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.	Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.	Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.

**Safety & Quality:** My nurse educated her patient in continuing to take her prenatal vitamins even if she runs out to ensure her babies health.

**Clinical Judgment:**

**Patient Centered Care:**

**Professionalism:**

I was professional when a patient was emotional over being told disappointing news by remaining at her side and handing her tissues for her tears.

**OB Community Verification Sheet**
