**Instructional Module 6: Obstetrics Community Clinical Experience**

Community Site: Bridget Winn-Covenant Medical Group: women's health

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I was able to observe pap smears, an IUD removal that was slightly implanted, and a nexplanon removal and insertion. We also sent a patient to a NST and got to read the strip.

2. What was the best/most interesting part of the experience?

The most interesting part was observing how she would assess each patient depending on what they were there for.

3. Is a community nursing position something that you would consider working in? Why or why not?

It is something I would be interested in working in. I really liked that they had a variety of patients to see throughout the day, and the schedules they have. However, after discussing with the nurse she recommended getting hospital experience before going to a clinic.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

I felt they met the needs of the population since they had contraceptive resources available such as nexplanon and an IUD. They also had many options of where to send people for ultrasounds and mammograms.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

Most of the teaching that was done was about contraceptive use. Whether it was an IUD, nexplanon, physical barriers, and oral contraceptives. I thought the teaching she was doing was very good and she would also give them flyers with information to go home with.

6. Provide examples of care describing *one or more* of the IM6 Student Learning Outcomes.

IM6 Student Learning Outcomes				
Safety & Quality	Clinical Judgment	Patient Centered Care	Professionalism	Communication & Collaboration
Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.	Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.	Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.	Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.	Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.

Safety & Quality:

Clinical Judgment:

Patient Centered Care:

Professionalism:

Communication & Collaboration:

I saw how the nurses assessed the patients then communicated to the nurse practitioner and after she saw them she would write a medical note that the doctor would eventually read. They would all exchange ideas and help one another.
