Instructional Module 6: Obstetrics Community Clinical Experience

Community Site: STD Clinic

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

Lab draws: butterfly + straight
Education: Patient + lab
Laboratory education: ↑ in STIs in Lubbock

2. What was the best/most interesting part of the experience?

We were doing a full blood panel on an HIV patient, but once we poked him he had passed out. The MA Maggie asked me to hold their head up and once I did he started having a seizure! We both prioritized safety by making sure the needle was capped and proper disposal of all his blood products!

3. Is a community nursing position something that you would consider working in? Why or why not?

I genuinely love each community clinical we have, and would consider something similar later on in life! For now, I would say no. I don't want to lose any of the skills we have learned so far!

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, no patient was judged, and they make sure to give education to each patient.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

YES! General things taught: Safe sex, ending the stigma of STIs, + getting a deeper hx from patients

Yes it was; Questions always came from concern, but the staff always made the patients calm and at peace
