Instructional Module 6: Obstetrics Community Clinical Experience

Community Site: Bridget Winn FNP

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I observed patients coming in for women's health visits and 2 OB visits. I saw a lot of pap smears/annuals. I saw an IUD removal. I saw SO much education!

2. What was the best/most interesting part of the experience?

I got to see cervixes and it helped me understand effacement way better. I also saw an IUD removal! The best part was how kind the staff was!

3. Is a community nursing position something that you would consider working in? Why or why not?

Definitely, maybe later in my career after I gain experience. The schedule and flow is really nice.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, there was a wide range of women there for a variety of things. All the patients were happy with their care from my observation!

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

So much teaching! She educated on birth control, PCOS, endometritis, all the hormones, and answered all the questions/concerns so thoroughly. The teaching was more than adequate because she explained so they understood and educated on next steps.

6. Provide examples of care describing *one or more* of the IM6 Student Learning Outcomes.

IM6 Student Learning Outcomes				
Safety & Quality	Clinical Judgment	Patient Centered Care	Professionalism	Communication & Collaboration
Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.	Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.	Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.	Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.	Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.

Safety & Quality:

Clinical Judgment:

Patient Centered Care:

Professionalism:

Communication & Collaboration:

Bridget explained the criteria of diagnosing PCOS to a pt that was scared she might have it. She then explained all the further testing she was gonna do and why. She worked with the patient, formulating a plan together.
