**Instructional Module 6: Obstetrics Community Clinical Experience**

Community Site: City of Lubbock – STD CLINIC

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

Today I was able to watch Kristie Giemza, NP perform a pelvic exam on a lady that was suspected to have BV. I also was able to perform a whiff test with Kristie. Annette also allowed me to perform blood draws and test for HIV.

2. What was the best/most interesting part of the experience?

Honestly, it was all interesting. I enjoy clinicals and learning new things! I got to sit with the ladies in the lab, and they explained how the testing for syphilis was performed and how the titer is measured. I also got to see several samples on a microscope.

3. Is a community nursing position something that you would consider working in? Why or why not?

I would find it interesting working in this field by being able to provide pivotal information to members of our community that might not otherwise be taught about safe sex practices, preventative measures and personal hygiene.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, this site meets the needs of the patients they see and from what I saw today the nurses and the NP were very informative and non-judgmental towards the patients that they saw today.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

Annette was very informative regarding the testing, results and medication. She taught the importance of when to take, how to take and finishing the medication. She also taught the importance of following up for further testing of STI's. Her teaching was extremely informative on how to prevent spread of Syphilis. Overall, they did a great job!!!
