

Student Name Bridget Flores

Date: 9/10/25

**Instructional Module 6: Obstetrics Community Clinical Experience**

Community Site: CMG Womens Health - Bridget Winn

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

Throughout the day I observed pap smears, annual check ups, cultures, birth control consults. I got to watch a nexplanon removal and reinsertion

2. What was the best/most interesting part of the experience?

The best part of my experience was how welcoming everyone was and how well they treated me. The most interesting part of the day was seeing what goes on "behind the scenes" of a regular, annual check up.

3. Is a community nursing position something that you would consider working in? Why or why not?

After this clinical, I would say yes. I liked having the less stress and having more time to be with the patient and talk to them. And they are patients you see more than once.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, every woman got the help they need and the answers they were looking for. No one left feeling like they weren't cared for or heard.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

Yes, I saw a lot of patient teaching about birth control, bacterial vaginosis, UTIs, breast exams. I feel that it was very adequate. The patient's were provided with education with every single issue they were experiencing.

IM6 Student Learning Outcomes				
Safety & Quality	Clinical Judgment	Patient Centered Care	Professionalism	Communication & Collaboration
Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.	Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.	Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.	Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.	Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.

**Safety & Quality:**

9/10/25  
**Clinical Judgment:** I observed the nurse practitioner demonstrate Clinical judgement when caring for a postpartum patient with a hx of stillbirth who reported heavy bleeding + passing clots. The NP recognized this as abnormal and ordered an ultrasound and follow up. And completed a focused **Patient Centered Care:** assessment and went over meds + any other medical conditions to rule out.

**Professionalism:**

**Communication & Collaboration:**
