Instructional Module 6: Obstetrics Community Clinical Experience

Community Site: Parkridge Community Center

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I observed a pregnancy consultation where nurse collected & performed a pregnancy test, obtained patient's hx & concerns & provided education. I also observed an ultrasound both abdominally & vaginally.

2. What was the best/most interesting part of the experience?

The best part of my experience was the nurse's & advocate's compassion & comitment to provide helpful quality patient care. The nurse really genuinely provided care & education to patients to encourage them in a professional setting.

3. Is a community nursing position something that you would consider working in? Why or why not?

Yes, I would consider working as nurse in a community position but I would ~~not~~ prefer to gain skills practicing at a hospital first. I do like the aspect of nursing care in the community & help educating ~~for~~ patients.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, Parkridge can provide free services to confirm <sup>pregnancy,</sup> ~~pregnancy,~~ provide education & resources, & test for infections like STDs. This is benifical for patients who may be low income, uninsured, or needing education, resources, & support during early or middle stages of pregnancy.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

Yes, nurses are able to provide education on recomended next steps, abnormal vs. normal symptoms, & address pt's concerns, & correct false information. They can provide support, education, & resources to patients who due to financhal difficulty may otherwise not have recieved care.

6. Provide examples of care describing *one or more* of the IM6 Student Learning Outcomes.

**IM6 Student Learning Outcomes**

**Safety & Quality**

Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.

**Clinical Judgment**

Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.

**Patient Centered Care**

Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.

**Professionalism**

Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.

**Communication & Collaboration**

Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.

**Safety & Quality:**

**Clinical Judgment:**

**\*Patient Centered Care:**

Meet patients with their individual care. Provide resources that are relivant to particular patient's needs. Provide consulting in areas patient concered or provide further education building on patients previous knowledge.

**Communication & Collaboration:**

## Patient Centered Care

- At Parkridge pregnancy center I saw nurses providing patient centered care before, throughout, and after a patient's arrival. The nurse assessed the patient & identified each patient for their individual care. The nurse also provided resources that were relevant to each patient's case & particular needs of care. She provided further education to each patient building upon their previous knowledge without assumptions of patient's knowledge. The nurse additionally consulted the concerns of each patient while providing comfort and maintaining professionalism.
