Safety & Quality: N/A

Clinical Judgment: The patient was having a hard time with the baby breastfeeding. She was laying down in the bed and stated that was “the only way for him to latch”. The nurse then explained to the patient that she would have lactation nurse come in and speak with her.

Patient Centered Care: The nurse taught the dad how to swaddle the baby and once the line on the diaper changes to blue it means the baby is wet. (1st time parents)

Professionalism: While explaining the circumcision the father asked the nurse if he could be in the room with the baby because he did not trust anyone else with the baby and after she told him that he could not and he became irritated with her. She stayed professional in her communication with him.

Communication & Collaboration: N/A
