POST-CLINICAL REFLECTION OB Simulation Reflection - due on Thursday by 2359

To strengthen your clinical judgment skills, reflect on your knowledge and the decisions made caring for this patient by answering the reflection questions below.

Reflection Question	Nurse Reflection
<p>What feelings did you experience in clinical? Why?</p>	<p>Very nervous going into it but once in the simulation I felt like I was able to recall the information needed to be successful in the scenario. I think it was just the unknown and wondering if be able to recall what to do in the moment.</p>
<p>What did you already know and do well as you provided patient care?</p>	<p>I felt like definitely have the basic needs down and therapeutic communication. I felt like I did well reading a strip and when there was decels.</p>
<p>What areas do you need to develop/improve?</p>	<p>When a problem arises, I feel like I need to act on more what I know inside and not second guess my self. I definitely need to feel more confident running the IV pump as well.</p>
<p>What did you learn today?</p>	<p>How to deal with difficult family members. Not only do you deal with the patient but family/friends and that sometimes come with a lot of stress.</p>
<p>How will you apply what was learned to improve patient care?</p>	<p>How to constantly be assessing the patient because anything can go wrong fast.</p>
<p>Please reflect on how your OB simulation learning experience assisted in meeting 2-3 of the Student Learning Outcomes.</p>	<p>1. Was able to intervene with a patient hemorrhaging. Assessed the problem and notified the Doctor to get further instruction. Messaged the fundus and then reassessed in 15 min.</p> <p>2. Helped educate the patient and the family member on signs of infection to report and things to watch out for when the baby is delivered.</p> <p>3. Called the doctor and reported the baby was showing signs of sepsis. Was able to give the doctor brief hx and along with</p>

complications.
