

Now that I have finished my 10 shift I realized I love it in Labor and delivery. Being able to watch babies come into this world is such an amazing privilege. I think I have grown a lot as a student nurse. I've gotten to watch lots of things such as natural birth, c-sections, and births with Pitocin and an epidural. My preceptor Kim was amazing during the entire time. I asked lots of questions and she always answered as well as letting me do all the skills. The way she taught was amazing. I never felt pressure and always felt like I could ask her for help if necessary.
