Instructional Module 6: Obstetrics Community Clinical Experience

Community Site: Winn FNP

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I was with an OB/GYN nurse prac & I got to observe multiple vaginal exams, Papsmears, & an IUD placement.

2. What was the best/most interesting part of the experience?

Actually getting to see a cervix. After learning about it in lecture it was good to see what it is you're actually be feeling in a exam & dilation.

3. Is a community nursing position something that you would consider working in? Why or why not?

No, I enjoyed getting to see the nurse prac & would consider NP for a different specialty not OB/GYN. She did multiple vaginal exams all for same reason. I think it like a little more exposure & excitement.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

Yes, the women's concerns about their female concerns were heard, validated, & a solution was proposed. She was respectful & attentive.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

Yes. A lot of hormone regulation for perimenopausal & menopausal patients. The benefits/risks of progesterone & estrogen. A lot of education on yearly pap's & mammograms. I think the teaching was adequate, it was research based, & told in a understandable way w/ time for questions.

6. Provide examples of care describing *one or more* of the IM6 Student Learning Outcomes.

IM6 Student Learning Outcomes				
Safety & Quality	Clinical Judgment	Patient Centered Care	Professionalism	Communication & Collaboration
Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.	Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.	Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.	Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.	Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.

Safety & Quality:

Clinical Judgment: The NP used evidence-based data to provide treatment to her patients. She switched a pt from synthetic to natural estrogen based on data. She talked about how

Patient Centered Care:

research shows natural estrogen is easier metabolized by body & has significantly less risk of side effects.

Professionalism:

Communication & Collaboration: The NP communicated well with her patients. She talked about their concerns & took the time to explain possible treatment options. The NP explained all the procedures & talked through each step. She collaborated with the patients desires and gave the options & solutions for their health concerns.
