

IM6 Student Learning Outcomes				
Safety & Quality	Clinical Judgment	Patient Centered Care	Professionalism	Communication & Collaboration
<i>Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.</i>	<i>Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.</i>	<i>Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.</i>	<i>Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.</i>	<i>Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.</i>

Safety & Quality:

Clinical Judgment: OB SIM (11/12)

I utilized **clinical judgement** when administering Oxytocin. Even though the Doctor had called saying to increase her dose from 4mu to 8mu, I decided not to. According to the Oxytocin titration protocol, you should only increase it by 1-2 at a time. So, by administering a smaller dose, regardless of what the Doctor had ordered, I used clinical judgement for the safety of my patient.

Patient Centered Care:

Professionalism: OB SIM (11/12)

I utilized **professionalism** when advocating for my patient. In the scenario, my patient was showing signs of IPV, and did not feel comfortable getting pain meds since her spouse did not want her to. However, in order to do what is best for my patient, I had him step out of

Jasmine Abalos

the room so I could ask about their relationship dynamic (to ensure that she was safe) and get her some pain meds.

Communication & Collaboration:
