| Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles. | Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders. | Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders. | Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders. | Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders. |

Safety & Quality:

Clinical Judgment:

- RN called Dr to change a med time and dose because she noticed a pattern of hypertension before med was due and wanted to prevent hypertensive crisis/protocol

Patient Centered Care:

- decided not to ABOM because Lemaathe had a B/S and was not comfortable putting baby in that situation

Professionalism:

- we made sure to clean mom regularly and set up a stonite bag cleaning so before flush, we will try to make everything clean for her.

Communication & Collaboration:

- we spoke with dr about a moms concern to go home so upon agreement, we would monitor us Q2 hours for 6hrs and if all is good, they would d/c her with home monitoring BP and med. she is to have a follow up in 1 week @ clinic
