| Safety & Quality                                                                                                                                                  | Clinical Judgment                                                                                                                                               | Patient Centered Care                                                                                                         | Professionalism                                                                                                                                                                         | Communication & Collaboration                                                                                                                                                      |
| Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles. | Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders. | Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders. | Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders. | Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders. |

performed pregnancy testing while maintaining strict adherence to patient identification protocols. This ensures safety and accuracy in preventing medical errors. I assisted with initial prenatal intake focusing on systemic collection of maternal health history. This high quality assessment is the foundation for evidence based care ensuring that risk factors if any, are caught early.

**Safety & Quality:** performed pregnancy testing while maintaining strict adherence to patient identification protocols. This ensures safety and accuracy in preventing medical errors. I assisted with initial prenatal intake focusing on systemic collection of maternal health history. This high quality assessment is the foundation for evidence based care ensuring that risk factors if any, are caught early.

**Clinical Judgment:** the OB Sim significantly enhanced my clinical judgement by forcing me to move beyond text book theory into real-time decision making. When the baby in the scenario did not progress despite initial efforts for hypoglycemia and hypothermia, I had to recognize the failure to rescue on my end and transfer baby to a higher level of care.

**Patient Centered Care:** provided support for the mom whose baby was undergoing phototherapy for hyperbilirubinemia. I focused on patient centered care by encouraging mother to participate in the hand-off process and ensured she knew when and where to go to go see her baby.

**Professionalism:** I demonstrated professionalism by remaining calm and helpful during high-stress changes happening for mom and baby. I maintained a composed presence for the family to help with the transition for the patient.

**Communication & Collaboration:** I think this experience allowed me to practice communication and collaboration especially for the SBAR report for the NICU transfer. This required me to gather all information about the situation including vital signs and all interventions my peers and I did so that I could communicate that to the physician and receiving party (NICU)
