

Brenden van der Walt Career Recommendations:

God was the first to work. He is the Origin of work. Work is not created to just bring in money and to keep you busy, work is a way to honor God and to service others. Work was also not intended to make you unhappy, stressed and depressed, but to make you content, fulfilled and happy.

As a young, smart and ambitious person, you have potential to do a lot with your life, to serve God and others with your talent. We have also seen throughout the consultation that you have very strong interests, talents, values and a specific personality. Based on our conversation I would like to recommend the following fields for your career:

1. Engineering (Mechanical): Especially in research and design, Design Engineering, and Non Destructive Testing since you like to have new ideas and improve current ideas.
2. Engineering (Mechatronics) : with your more recent interest in technology, and your skills and interests in engineering, you will do great in Mechatronic engineering, with some education in programming.
3. Aeronautical Engineer: Since you would also like to do a little bit of programming you are analytical and very precise and proud of your work, you will also be a great fit for an aeronautical engineer.

Although your personality, skills, values and interests all agree with an engineering position, you are welcome to study and go through [O*Net Online](#) to find alternatives that you might want to research. Remember to refer back to your assessment results when making a decision.

Thank you for trusting me and Career Direct to help you with this important matter.
