

1. Poster title

Improved Quality of Life in SCI Patients through App-Based Transitional Care

2. Reference in APA formatting (7th edition)

Ting Liu; Sumei Xie; Yingmin Wang; Jie Tang; Xiaokuo He; Tiebin Yan; Kun Li (2021) *Effects of APP-based transitional care on the self-efficacy and quality of life of patients with spinal cord injury in China: Randomized controlled trial, JMIR mHealth and uHealth*. JMIR Publications Inc., Toronto, Canada.

3. (1) multiple choice question and answer per poster that reflects a key point from the article.

- **The question should be written in a simple and concise manner. It must include four answer options, in which only one is the correct answer.**

What were the defining factors that set the study group apart from the control group?

A) The control group received five follow-up phone calls extending to 24 weeks post-discharge.

B) The study group only received a single routine follow-up phone call 12 weeks post-discharge.

C) The study group received five follow-ups at weeks two, four, six, eight, and 12 through the app including a remote assessment, health education, interdisciplinary referral, and individualized patient interaction while the control group only received a singular routine follow-up phone call 12 weeks post-discharge.

D) The control group and study group didn't include other patients outside of patients with SCI making their clinical trial comparisons null and void.

4. Copy of the full article with the answer to your question identified with a yellow highlighter.
