

Destiny Houghtlen

1. The **temporal** site can be used when assessing a pulse in a child.
2. I would use the **caroid** site when checking for a pulse during CPR.
3. The **apical** site can be used when auscultating for an apical pulse during an assessment.
4. The **brachial** site can be used to assess an upper extremity blood pressure during an assessment.
5. I would use the **radial** site to assess the circulation to the hand during an assessment.
6. I would use the **ulnar** site to assess the circulation to the ulnar side of the hand during an assessment.
7. I would use the **femoral** popliteal site to check the circulation in the leg during an assessment.
8. I would use the **posterial tibial** to check the circulation in the lower leg during an assessment.
9. I would use the **dorsalis pedis** to assess the circulation in the foot during an assessment.
