

## Child with a Metabolic Condition

Chapter 32  
Rachel Haynes MSN, RN

---

---

---

---

---

---

---

### Endocrine System

- ▶ Consists of glands that effect many aspects
- ▶ If endocrine balance is off: hypo or hypersecretion
- ▶ 3 functional parts
- ▶ Hormones are complex chemical substances released by endocrine glands

---

---

---

---

---

---

---

### Endocrine System

#### Endocrine assessment

- ▶ Birth hx
- ▶ Height hx of family members
- ▶ Pubertal hx of parents
- ▶ Developmental milestones
- ▶ Height/weight/BSA/BMI
- ▶ Family hx of endocrine disorders
- ▶ Hx of brain tumors, head trauma, chemo, radiation to head or neck

---

---

---

---

---

---

---

### Endocrine Glands

#### 1. Pituitary Gland

- ▶ Somatotropin
- ▶ Follicle stimulating hormone (FSH)
- ▶ Luteinizing hormone
- ▶ Gonadotropin hormone
- ▶ Prolactin
- ▶ Thyroid stimulating hormone (TSH)
- ▶ Adrenocorticotrophic hormone (ACTH)
- ▶ Melanocytes-stimulating hormone
- ▶ Luteinizing-releasing hormones
- ▶ Oxytocin
- ▶ Antidiuretic hormone (ADH)

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Endocrine Glands

#### 2. Thyroid

- ▶ Secretes
  - ▶ Triiodothyronine (T3), Thyroxine (T4), Calcitonin
- ▶ Regulates
  - ▶ Blood calcium concentrations and processes protein, fat, and carbohydrate catabolism
- ▶ Major role
  - ▶ Regulate basal metabolic rate
  - ▶ Regulates utilization of O<sub>2</sub> and CO<sub>2</sub>

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Endocrine Glands

#### 3. Parathyroid (4 total)

- ▶ Secretes
  - ▶ Parathyroid hormone (PTH)
- ▶ Major role
  - ▶ Regulate and maintain calcium levels
  - ▶ Influences potassium, phosphate, and magnesium levels

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Endocrine Glands

### 4. Adrenal Gland

- ▶ Produces and releases
  - ▶ Mineralocorticoids or aldosterone
  - ▶ Sex hormones
    - ▶ Progesterone
    - ▶ Estrogen
    - ▶ androgens
- ▶ Medulla of adrenal gland produces
  - ▶ Epinephrine and norepinephrine
  - ▶ Cortisol and corticosteroid

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Endocrine Glands

### 5. Pancreas

- ▶ Secretes
  - ▶ Insulin from beta cells
  - ▶ Glucagon from alpha cells
- ▶ Main role
  - ▶ Regulate blood glucose

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Endocrine Glands

#### 6. Ovaries

- Secrete
  - Progesterone and estrogen
- Main role
  - Body changes during puberty and pregnancy

#### 7. Testes

- Secrete
  - Testosterone
- Main role
  - Sexual maturity

---

---

---

---

---

---

---

### NCLEX Question

A preschool-aged child is gaining weight and is sluggish. Which endocrine gland should be evaluated for this child?

- a. Thyroid
- b. Pancreas
- c. Pituitary
- d. Parathyroid

---

---

---

---

---

---

---

### Endocrine Gland Disorders

#### Syndrome of Inappropriate Antidiuretic Hormone (SIADH)

- ▶ What is it?
  - ▶ Overproduction and excretion of antidiuretic hormone (ADH) from \_\_\_\_\_ gland
  - ▶ Results in kidneys absorbing more water, decreased urine output, increased fluid retention
- ▶ Cause
  - ▶ Head injury

---

---

---

---

---

---

---

### Endocrine Gland Disorders

#### Syndrome of Inappropriate Antidiuretic Hormone (SIADH)

- ▶ SIADH leads to hyponatremia, why?
- ▶ S/Sx of hyponatremia?
- ▶ What would the assessment look like?
- ▶ What orders do you anticipate?

---

---

---

---

---

---

---

### Endocrine Gland Disorders

#### Deficient anterior pituitary hormone: *Pituitary dwarfism*

- ▶ Child with dwarfism
  - ▶ Normal proportions, shorter overall stature
  - ▶ Growth of <2 in per year until preschool
  - ▶ Appear overweight
- ▶ When suspected, analysis of:
  - ▶ Bone age
  - ▶ Serum growth hormone
  - ▶ Previous growth plots

---

---

---

---

---

---

---

### Endocrine Gland Disorders

Deficient anterior pituitary hormone: *Pituitary dwarfism*

- ▶ Assessment
  - ▶ Linear growth retardation with normal skeletal proportions
  - ▶ Normal intelligence/mental age/cognitive processing
  - ▶ Delayed puberty
  - ▶ Lab eval of GHD
- ▶ Interventions
  - ▶ HGH injection
  - ▶ Earlier tx=greater chance of response
  - ▶ Emotional support
  - ▶ Positive reinforcement

---

---

---

---

---

---

---

---

### Endocrine Gland Disorders

Deficient anterior pituitary hormone: *Pituitary dwarfism*

- ▶ Nursing considerations
  - ▶ Thorough assessment dental anomalies
    - ▶ Jaw may have growth retardation
    - ▶ Permanent teeth may not erupt properly
  - ▶ Emotional support
    - ▶ Child AND family
    - ▶ Local/national support groups

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### Diabetes Mellitus Type 1 (T1D)

- ▶ No insulin produced by pancreas
- ▶ Classified as *insulin dependent*
- ▶ Life-long insulin injections or pump
- ▶ Dx between infancy and young adulthood
- ▶ Due to increasing childhood obesity, type 2 is surpassing type 1 for children

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

- ▶ T1D
- ▶ Cause
- ▶ Autoimmune attack on beta cells
- ▶ Autoantibodies present for up to 9 years before symptoms show
- ▶ First presentation is usually \_\_\_\_\_

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### Diabetic ketoacidosis (DKA)

- ▶ Lack of glucose to cells
  - ▶ Why?
- ▶ Adipose and muscle tissue broken down in attempt to provide cells with glucose
- ▶ Fats convert to energy, liver produces ketones

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### Diabetic ketoacidosis (DKA)

- ▶ Ketones accumulate; spill into urine → leads to metabolic acidosis
- ▶ Body attempt to compensate
- ▶ Body loses ability to compensate, ketones continue to increase

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

- ▶ DKA
- ▶ Kids in DKA need PICU care
- ▶ What will you monitor?
- ▶ What education will you provide?

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### T1D

- ▶ Assessment findings
  - ▶ Glycosuria
  - ▶ Elevated 8 hour fast
  - ▶ Polyphagia, polydipsia, polyuria
  - ▶ Malnourished appearance
  - ▶ Fatigue
  - ▶ Fruity breathe
  - ▶ Yeast infection
  - ▶ Dry, flushed skin
  - ▶ Confusion

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### T1D

- ▶ Interventions
  - ▶ Priority: assess and tx for DKA
  - ▶ Stabilize acidotic state
  - ▶ Normalize electrolyte levels
  - ▶ Insulin drip initiated and titrated
  - ▶ Wean from IV to SubQ insulin
  - ▶ NO IV potassium until urine output established
  - ▶ Facility specific protocols to guide tx

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### T1D

- ▶ Patient and family education
  - ▶ Blood glucose checks
  - ▶ Administer insulin
  - ▶ Pediatric Endocrinologist
  - ▶ Carb counting
  - ▶ Insulin pump
  - ▶ Long term care
  - ▶ Exercise

---

---

---

---

---

---

---

### Disease Process of Metabolic System Insulin Review

- ▶ Lispro (Humalog)
  - ▶ Rapid acting; clear
  - ▶ Onset: 5-15 min; Peak: 30-90 min; Duration: <4 hr
- ▶ Regular
  - ▶ Short acting; clear
  - ▶ Onset: 30 min; Peak: 2-3 hr; Duration: 6-8 hr
- ▶ NPH (Humulin)
  - ▶ Intermediate acting, cloudy
  - ▶ Onset: 1-2 hr; Peak: 6-12 hr; Duration: 18-26 hr
- ▶ Glargine (Lantus)
  - ▶ Long acting, clear, basal insulin
  - ▶ Onset: 4-6 hr; Peak: 14-26 hr; Duration: 28-36 hr

---

---

---

---

---

---

---

---

### Disease of Metabolic System

#### T1D: Hypoglycemia

- ▶ Too much insulin, not enough eating
- ▶ Occurs anytime in child with DM
- ▶ Symptoms develop rapidly
- ▶ Life-threatening
- ▶ Severe hypoglycemia in hospitalized pts caused by what?

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

- ▶ T1D: Hypoglycemia
- ▶ Treatment
  - ▶ 15-20 grams of carbs
  - ▶ Reassess in 15 min
  - ▶ Second dose of carbs if needed
  - ▶ Monitor vitals
  - ▶ Supervise until blood glucose stabilizes
- ▶ Decreased LOC?
  - ▶ Dextrose 50% IV push (per order)
  - ▶ IV glucagon (per order)

---

---

---

---

---

---

---

---

### Disease Process of Metabolic System

- ▶ Patient education
  - ▶ Pages 585-587 in text; orange boxes
- ▶ When to tell patients to call provider
  - ▶ Two blood glucose readings  $<70$  OR  $>300$
  - ▶ Low blood glucose requiring glucagon
  - ▶ Any levels of ketones in urine

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### Diabetes Mellitus Type 2 (T2D)

- ▶ Non insulin dependent
- ▶ Typically seen in overweight/obese children
- ▶ Reaching epidemic proportions
- ▶ Genetic predisposition
- ▶ Environmental factors
- ▶ Developed insulin resistance
  - ▶ Body still produces insulin
  - ▶ Decreased sensitivity to its effects

---

---

---

---

---

---

---

### Disease Process of Metabolic System

#### T2D

- ▶ Assessment
  - ▶ Hyperglycemia
  - ▶ May demonstrate acanthosis nigricans
  - ▶ HTN, sleep apnea, hyperlipidemia
- ▶ Treatment
  - ▶ Exercise
  - ▶ Weight loss
  - ▶ Oral hypoglycemic
  - ▶ Insulin

---

---

---

---

---

---

---

### Disease Process of Metabolic System

- ▶ **T2D**
- ▶ Nursing interventions
  - ▶ Education
  - ▶ Lifestyle changes
  - ▶ Weight management
  - ▶ Blood glucose control
- ▶ Support systems
  - ▶ Juvenile Diabetes Research Foundation
  - ▶ American Diabetes Foundation
  - ▶ American Academy of Pediatrics

---

---

---

---

---

---

---

### Inborn Errors of Metabolism

- ▶ Large class of rare genetic diseases caused by altered biochemistry
- ▶ Prevent body from properly and effectively turning food into energy source
- ▶ Caused by alteration in specific proteins
- ▶ Autosomal recessive genetic disorders
- ▶ Make dietary changes to avoid complications
- ▶ Lack of dietary changes can result in:

---

---

---

---

---

---

---

### Inborn Errors of Metabolism

#### Phenylketonuria (PKU)

- ▶ Inability to metabolize phenylalanine
- ▶ Liver has deficient amount of enzyme phenylalanine hydroxylase
- ▶ Phenylalanine is an essential amino acid found in most protein
- ▶ Build up of phenylalanine over time: cause brain damage

---

---

---

---

---

---

---

### Inborn Errors of Metabolism

#### Phenylketonuria (PKU)

- ▶ Assessment
  - ▶ Musty smelling urine
  - ▶ Deficiency of pigment melanin
  - ▶ Usually blonde hair/blue eyes
  - ▶ High risk for eczema
  - ▶ Photosensitivity
  - ▶ Fair skin

---

---

---

---

---

---

---

### Inborn Errors of Metabolism

#### Phenylketonuria (PKU)

- ▶ Diagnosing
  - ▶ PKU test done at 24 hr old
  - ▶ Must be done *after* ingested some type of protein
    - ▶ Breast milk or formula

---

---

---

---

---

---

---

### Inborn Errors of Metabolism

#### Phenylketonuria (PKU)

- ▶ Symptoms
  - ▶ Show symptoms within a few weeks of life
  - ▶ Older infants:
    - ▶ Failure to thrive
    - ▶ Lethargy
    - ▶ Neurological toxicity

---

---

---

---

---

---

---

### Inborn Errors of Metabolism

#### Phenylketonuria (PKU)

##### ► Interventions

- Eliminate dietary phenylalanine
- High protein foods should be avoided
- Formula with enzymatic hydrolysate of casein should be used
- As child grows: avoid eggs, flour, fish, legumes, nuts breads, cheese, poultry, meats, and foods containing phenylalanine

---

---

---

---

---

---

---
