**Student Developed Simulation Scenarios**

**Directions:** Students will be expected asked to develop a scenario on a chosen topic related to the Maternal Child Nursing content taught throughout the semester. Faculty will be implementing the student developed scenarios on the day of the scheduled simulation. Students will be expected to perform a scenario in the simulation center that was developed by one of their classmates on the day of the simulation. Students will sign up to be in a group of 4 to develop a simulation scenario on the assigned topics. Please only include skills in the scenario students have been taught in the curriculum already.

The scenario should be should be roughly 15 minutes in lengths. Students should use the attached storyboard and patient chart to develop their scenario and will need to submit the completed storyboard by **October 30, 2023 by start of class** via the Student Developed Scenarios dropdown. You are required to wear your student uniform the day of the simulation. A mid-semester checkpoint will be at week 7 (**October 9, 2023**) of the course. The first page of the document will be required to be turned in at the beginning of class so the faculty of your scenario can review the document.

Students will vote on the best Student Developed Scenario and the chosen team will receive a prize.

During the debriefing process students will be expected to provide constructive feedback to their fellow students. Please be kind and considerate. Remember this is constructive feedback and not criticism. All students are expected to actively participate in the group debriefing.

The activity requirements and grading rubric are below. To be satisfactory for this experience you will need to score at least 77%. For any student not attending the day of simulation, credit will not be granted for the simulation time and will follow the Student Accountability Flow Sheet. This experience is worth 4 hours of simulation. Remember any missed simulation time needs to be made up hour for hour.

	<b>Student Developed Simulation Scenario Rubric</b>	<b>Points</b>	<b>Total</b>
1	In your group, develop a simulation scenario related to the assigned topic.	10	
2	Develop 2 questions to ask in debriefing related to your developed scenario. Questions should be specific and not simply what did you do well and how could you improve.	10	
3	Develop 2 questions NCLEX style questions with rationale related to the content in your developed scenario.	10	
4	Be creative and highlight the essential information to know about the assigned topic on the storyboard.	10	
5	Incorporate the core values of caring, diversity, excellence, integrity, and “ACE”- attitude, commitment, and enthusiasm throughout the group process.	10	
6	Mid-semester checkpoint with faculty on <b>October 9, 2023</b> . (Page 1 document to dropdown by 0800. Meet with assigned faculty after class.)	10	
7	Completed Storyboard submitted to the Student Develop Simulation Scenarios Dropdown on Edvance360 by <b>October 30, 2023 at start of class</b> .	17	
8	Actively participates throughout the entire process (Development/day of simulation).	23	
	<b>Total</b>	100	

<b>Student Developed Simulation Scenario Storyboard</b>	
<p><b>Identified Problem/Scenario Topic and Related Resources:</b></p> <p><b>Gestational Diabetes</b>  <b>Chapter 8 textbook</b>  <b>Pages 136-138</b></p>	<p><b>Desired Overall Goal:</b></p> <ol style="list-style-type: none"> <li><b>1. Recognize inappropriate glucose regulation and s/s of diabetes</b></li> <li><b>2. Communicate effectively with SBAR to provider</b></li> <li><b>3. Implement orders from the doctor</b></li> <li><b>4. Effective education of glucose control with medication and non-pharmacological measures.</b></li> </ol>
<p><b>Case Summary:</b>  A 34-year-old G3P2 obese woman with a history of gestational diabetes with her last pregnancy presents to the clinic for a follow-up from a positive glucose tolerance test with a blood sugar level of 152 mg/dL. She was able to control her GD with diet alone with past pregnancy but reports high sugar levels, increased urination, thirst, and hunger during this pregnancy.</p>	<p><b>Expected Interventions of Students: (Minimum of 5 required.)</b></p> <ol style="list-style-type: none"> <li><b>1. Identify the patient, verify allergies, and listen to the concerns of the patient.</b></li> <li><b>2. Take VS and a sugar level with the glucometer</b></li> <li><b>3. Call the provider and discuss glucose reading, symptoms, and take orders over the phone</b></li> <li><b>4. Address any questions the patient has</b></li> <li><b>5. Teach the patient how to administer insulin</b></li> <li><b>6. Reinforce importance of maintaining diet and exercising 30 minutes most days of the week</b></li> <li><b>7. Instruct them to keep a log of glucose numbers</b></li> </ol>
<p><b>Supplies:</b></p> <ol style="list-style-type: none"> <li><b>1. Alcohol swabs</b></li> <li><b>2. Insulin pen</b></li> <li><b>3. Sub-q needles</b></li> <li><b>4. Sim-woman</b></li> <li><b>5. Glucometer</b></li> <li><b>6. Lancets</b></li> </ol>	
<p><b>NCLEX Questions</b></p> <ol style="list-style-type: none"> <li><b>1. A 34-year-old female is currently 28 weeks pregnant. You're collecting the patient's health history. She has the following health history: gravida 3, para 2, BMI 32, hypertension, depression, and family history of Type 2 diabetes. Select below all the risk factors in this scenario that increases this patient's risk for developing gestational diabetes?</b> <ol style="list-style-type: none"> <li>A. 34-years-old</li> <li>B. 28 weeks pregnant</li> <li>C. BMI 32</li> <li>D. Hypertension</li> <li>E. Depression</li> <li>F. Family history of Type 2 diabetes</li> </ol> <p><b>Answer: A, C, F</b></p> </li> <li><b>2. When do most patients tend to develop gestational diabetes during pregnancy?</b> <ol style="list-style-type: none"> <li>A. usually during the 1-3 month of pregnancy</li> <li>B. usually during the 2-3 month of pregnancy</li> <li>C. usually during the 1-2 trimester of pregnancy</li> <li>D. usually during the 2-3 trimester of pregnancy</li> </ol> <p><b>Answer: D</b></p> </li> </ol>	

## Case Flow (15-20 Minute Simulation Time)

Initiation of Scenario:														
Case Study: Patient on bed- Handoff received Patient in stable condition with report of increase thirst and increased urination and feels fatigued

<b>GU</b>	<b>WNL</b>													
<b>Other</b>	<b>NA</b>													

**Debriefing Questions:**  
**1. What education did you give to your patient? Was there anything else that you would have educated them on if you could go back?**  
**2. What was different about caring for someone outpatient versus an inpatient setting such as the hospital?**

Ashley, Katelyn, Allison, Kenny

**Patient Report:**

34 year old G3P2, 28 weeks pregnant presents today for a follow-up from a failed glucose tolerance test with the BS level begin 152 mg/dL. In her second pregnancy she had gestational diabetes that was controlled by diet alone. She has been having increased thirst, hunger, and urination since her last appointment. VS were stable HR 85 BP 124/81 Temp 98.3 RR 19 SpO2 99%. Call the doctor when you've completed your assessment.

**Additional information, Medical History:**

**Patient data:**

**DOB: 1/12/1989**

**MR#: 0077124981**

**Prior medical history: GD, HTN, Depression, BMI 32, Family history of T2D**

**Allergies: Penicillin**

**Social history: Full time teacher at an elementary school, single mom**
